

Riley Underwood

Full Stack Developer - Ripple Learning LLC

Website: boltenbeeper.github.io/portfolio/

SUMMARY

Extremely passionate, creative, and driven Full Stack Software Engineer with 5+ years of coding practice in both frontend and backend development across multiple languages and platforms. Specialized ability to innovate and mentor coming from deep rooted knowledge. Strong proficiency in Python and JavaScript programming built on a love for coding that started at 11 years old, bringing a variety of experience from game design, web development, graphic design. Always striving to learn more and seeking to do meaningful work that makes a difference.

EXPERIENCE

Ripple Learning LLC, Austin — Full Stack Developer

February 2024 - April 2024

- Led development of backend code to integrate OpenAI's ChatGPT for client's innovative web application, accounting for over 25% of the project's total code contribution.
- Worked closely with both frontend and backend team to deliver projects by deadlines, aiding less experienced developers with more complicated tasks and saving large amounts development time.

Chaparral Star Academy, Austin — IT Team Intern

August 2019 - June 2020

- Gained hands-on experience in Python while learning crucial team coordination, project planning, and time management practices.
- Collaborated with cross-functional teams to build an electronically accessed Chromebook storage container using a Raspberry Pi, stepper motor, and keypad interface.

EDUCATION

Austin Coding Academy, St. Edward's University, Austin — Trade School

June 2022 - April 2023

- A one year, on campus trade school led by professional developers providing expertise and knowledge essential for growth.
- Learned essential web development and full stack app development skills trained through daily, solo and group projects.
